

## Customer Identification

Safe and Secure with DESKO Scanners

Customer  
Europcar

Application  
Genuine-ID

DESKO Product  
PENTA Scanner®

jenID Solutions provides innovative software solutions for automated ID document authentication addressing customers within governmental and commercial environments. In 2014 the company was founded in Jena, Germany, where also the headquarters are located. An additional sales office can be found in Munich. Having started as an innovative and flexible start-up, jenID is now the partner of choice for the automated authentication of ID documents.

“The innovative ID document scanners by DESKO are the preferred hardware to meet the demands of our customers regarding ID document verification. Combined, the PENTA Scanner® and our authentication software Genuine-ID provide an efficient system which ensures reliable and quick identity checks”, states Thomas Winter, CEO, jenID Solutions.

## Customer Identification (KYC) in Car Rental Stations

### DESKO PENTA Scanner® and jenID Genuine-ID authentication software

With identity theft and fraud being on the rise, it is increasingly important for industries, e.g. car rental stations, to take appropriate measures to protect their valuable property. Companies need to know who their customers are. To ensure that, DESKO works together with software professional jenID Solutions since 2017 with the goal to equip more than 300 Europcar car rental stations all over Germany with a fully automated, secure and user-friendly tool called Genuine-ID EASYCHECK. The solution supports agents in the quick and reliable verification of the customer's identity before handing out the key to the car.

Genuine-ID EASYCHECK combines DESKO's PENTA Scanner® and jenID's authentication software Genuine-ID. The system provides an intuitive and easy-to-use solution for the reliable verification of ID documents and drivers' licenses. The PENTA Scanner® is a user-friendly document scanner

which enables staff members to quickly perform scans of passports and ID cards. The agent just needs to place the document on the scan window. Within seconds the PENTA Scanner® captures ID and image data under three light sources as well as the data stored on the RFID chip of biometrical passports. The captured images are being sent to jenID's software Genuine-ID which then automatically performs the authentication of the ID document. The software compares the document with an extensive document database including all European ID documents which is constantly being extended and updated. Identity checks with the PENTA Scanner® and jenID's software Genuine-ID help you comply with KYC challenges and enhance your security. They are particularly suitable for industries which perform high-risk transactions and which have to take appropriate measures to secure their property and protect their assets.

#### DESKO Product – PENTA Scanner®

The PENTA Scanner® is a user-friendly multidocument scanner providing accurate read results from ID documents, drivers' licenses, barcodes, magnetic stripe and chip or smart cards.

Handling the PENTA Scanner® is intuitive: just place the document on the large scan window. In one step the device automatically captures all relevant customer data and an image copy under different light sources, which can be stored for further processing or complying with internal or legal requirements.

#### Advantages

- Automated data capture from ID documents
- Automated verification of documents
- Reads biometric passports (RFID/e-Passport)
- User-friendly handling
